

**Product range 9 – Tube Clamps**

# Technical Information

## HANSA-FLEX Tube Clamps

### Tube clamps according to DIN 3015

#### Types of clamp bodies

The clamp bodies are available in these materials ex store

- Polypropylene (dark green colour)
- Polyamide (black colour)
- Solid rubber (black colour)
- Aluminium

Upper and lower clamp halves are identical. The inside of the clamp is available with or without webs.

Webs on the inside of the clamps have a vibration and impact reducing effect and absorb force towards the direction of the tube axis. A spacing between both halves produces the bias of the tube.

For the support of hoses and cables, we recommend to use clamps with an even inside without bias. The spacing measure  $s_1$  is not required. Thus, the block height  $h_1$  is reduced.

#### Types of metal parts

As a regular feature of the light and double series clamps, screws, rail nuts and cover plates are zinc coated, welding plates phosphatized and support rails uncoated.

As a regular feature of the heavy series clamps, all steel parts are uncoated.

All steel parts of the different construction series are also available ex stock in stainless steel type W5 and in rust- and acid-resisting stainless steel 1,4571 (AISI 316 Ti).

Other surface treatments are available upon request.

UNC-threads are available upon request

Metric thread	corresponding UNC-thread
M 6	1/4 – 20 UNC
M 8	5/16 – 18 UNC
M 10	3/8 – 16 UNC
M 12	7/16 – 14 UNC

## HANSA-FLEX Tube Clamps

### Mechanical Properties

	<b>Polypropylene (PP)</b>	<b>Polyamide 6 (PA 6)</b>	<b>Aluminium</b>	<b>Rubber</b>
Density	0,906 g/cm <sup>3</sup>	1,12 – 1,15 g/cm <sup>3</sup>	2,65 g/cm <sup>3</sup>	0,98 g/cm <sup>3</sup>
Flexural Deflection	36 N/mm <sup>2</sup>	130 ... 200 N/mm <sup>2</sup>	70 N/mm <sup>2</sup>	—
Impact Resistance	no break	no break	—	—
Compressive Strength	90 N/mm <sup>2</sup>	120 N/mm <sup>2</sup>	HB 500...600 N/mm <sup>2</sup>	shore
Modulus of Elasticity	1500 N/mm <sup>2</sup>	3000 N/mm <sup>2</sup>	70.0000 N/mm <sup>2</sup>	–
Tensile Strength without reaque	25 – 35 N/mm <sup>2</sup>	80 – 90 N/mm <sup>2</sup>	180 N/mm <sup>2</sup>	8,5 N/mm <sup>2</sup>

### Thermal Properties

Temp. Resistance	– 30 up to + 90°C	– 40 up to + 120°C	300°C	– 50 up to + 120°C
------------------	-------------------	--------------------	-------	--------------------

### Chemical Properties

Weak Acids	limited resistant	limited resistant	—	resistant
Weak Alkalis	limited resistant	limited resistant	—	resistant
Alcohol	resistant	resistant	—	resistant
Petrol	limited resistant	resistant	—	limited resistant
Mineral Oils	limited resistant	resistant	—	resistant
Other Oils	resistant	resistant	—	resistant

Other materials on request.

The outlined particulars are approximate values and are only valid as references, which are not binding, also with regard to possible protection of third parties, and they do not exempt you from your own examination of suitability of the products delivered by us.

Therefore, these values can only be used in a limited sense for construction purposes.

The application of the products is carried out outside our control possibilities and, therefore, is exclusively subject to your own area of responsibility.

If, however, liability should be possible, it would be limited for all damages to the value of the goods supplied by us and in use by you.

It goes without saying, that we guarantee the perfect quality of our products according to our general sales and delivery conditions.

## HANSA-FLEX Tube Clamps

### Assembly Instruction

#### Assembly on metal welding plates

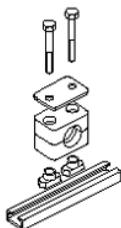

Place welding plates on a base appropriate for the load. Make sure that the clamps are properly aligned. Clamp lower clamp half onto welding plate, insert tube, place upper clamp half onto lower half and fasten with the screws. Attention must be paid to the bias (after completed assembly, clamp halves may not be in contact)!

Do not weld with fitted plastic clamp!

Extended welding plates may be screw-fastened to the base. Assembly on support rails

#### Assembly on support rails

Support rails are available in four different heights and come in pieces of 1 m or 2 m length, as required.

Weld on support rail or screw-fasten with fastening angle bracket.

Insert support rail nuts in rail and turn until stoppage. For heavy duty construction series, nuts are simply pushed in.

Clamp lower clamp half on support rail nuts, insert tube, place upper clamp half onto lower half and fasten with the screws. Before fastening the screws, the clamp may still be positioned.

Attention must be paid to the bias (after completed assembly, the clamp halves may not be in contact)!

#### Construction assembly

HANSA-FLEX Clamps allow the assembly of multiple clamps of the same construction size and of different tube diameters one above the other.

The construction assembly is carried out with special fixing screws that are secured against twisting by applying a locking plate.

Clamp lower clamp half on welding plate or support rail respectively, insert tube, place upper clamp half on lower half and fasten with fixing screws.

The fixing screw juts out from the upper clamp half. The application of a locking plate securely fastens the fixing screw and prevents twisting.

Clamp on second clamp half on to the fixing screws etc.

# Technical Information

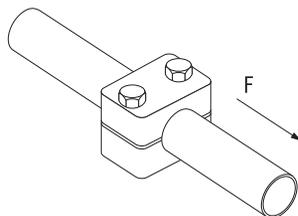

## HANSA-FLEX Tube Clamps

### Screw Tightening Torque and axial Pipe Shearing Forces

The indicated screw tightening torque and axial pipe shearing forces refer to the assembly with cover plates and outside hexagon bolts according to DIN 931/933.

The axial pipe shearing force (according to DIN 3015, part 10) is an average value, determined by three tests made with a steel pipe according to DIN 2448 of St 37, for which static friction is presupposed (temperature during tests: 23°C).

When loading the HANSA-FLEX clamp with the indicated test force ( $F$ ) in axial pipe direction, the pipe does not slide in the clamp.

### Light series (DIN 3015, part 1)

Size	Fixing screw	Polypropylene		Polyamide		Aluminium	
		Screw tightening torque (Nm)	Pipe shearing force $F$ (kN)	Screw tightening torque (Nm)	Pipe shearing force $F$ (kN)	Screw tightening torque (Nm)	Pipe shearing force $F$ (kN)

## HANSA-FLEX Tube Clamps

### Recommended Clamp Pitch

The clamp pitches assigned to the respective outside pipe diameters are standard values for static load.

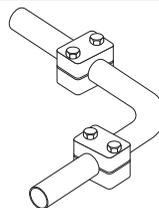

**Outside pipe diameter (mm)**

**Clamp pitch A (mm)**

6,0 – 12,7	1,0
12,7 – 22,0	1,2
22,0 – 32,0	1,5
32,0 – 38,0	2,0
38,0 – 57,0	2,7
57,0 – 75,0	3,0
75,0 – 76,1	3,5
76,1 – 88,9	3,7
88,9 – 102,0	4,0
102,0 – 114,0	4,5
114,0 – 168,0	5,0
168,0 – 219,0	6,0

### Pipe Bend Assembly

Pipe bends must be fixed with HANSA-FLEX pipe clamps immediately in front of and behind the bend.

### Used Materials

Rubber only available for light series and double clamps, inside smooths and heavy series grooved design.

Aluminium only available for light series size 1 to 6 and heavy series size 1 to 8

Smooth interior surface in heavy series only size 4

Aluminium clamps only available in a grooved design

Inside smooth light series only size 1 to 6

HSRS42	42	61

HSRS hydraulik steel-clamps are mainly used in the field of building machinery.

The support-block is welded to the machine body or another component either in upend or flat position. The tube-clamp is screwed on.

The robust construction of the clamp has an impact- and vibrationabsorbing effect. The small dimension/height of the clamp allows hydraulic cables to be fitted later on – e.g. for installing additional equipment to building machinery.
